Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(e). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cortner, Jr. (3,902,461) in view of Mowbray et al (4,074,659). Cortner, Jr. Shows a method of making and apparatus of an animal insecticide applicator comprising a bag 22 for holding a quantity of insecticide 14, the bag having a top (unnumbered), two sides 24, 28 and a bottom 26, a first and second tie rope 70 stitched to and extending at least partially and in fact entirely across the length of a tube (unnumbered) extending the width of the bag 54, see fig. 10, the tie rope 70 having a length of rope hanging free at each end of the bag 54 for use in hanging the bag from an overhead support. The bag 111 including a coupler 126, see fig. 14, for joining the bag 111 in a side by side relationship, see fig. 15 to another bag 113. The bag 22 having a plurality of straps 36, see fig. 3a, along the top of the bag 22 through which the support or rope is inserted. Cortner, Jr. does not show the use of a rigid tubular support. Mowbray et al teach an insecticide applicator having a bag 1, filled with a quantity of insecticide 2, and having an rigid tubular support 4 coupled with and extending across the top 9 of the bag 1. With respect to claims 1 and 6, to use the rigid tubular support of Mowbray et al with the applicator of Cortner, Jr. would have been obvious to one skilled in the art in order to

Art Unit: 3644

provide extra rigidity to the applicator to ensure maximum coverage and dispersal when in use. With respect to claims 4 and 9 to use the coupler of Cortner, Jr. Fig. 15 with the bag combination of Cortner, Jr. Fig. 3a and Mowbray et al would have been obvious to one skilled in the art in order to keep the opposite sides 24, 28 together to more efficiently dispense the insecticide within the apparatus.

Conclusion

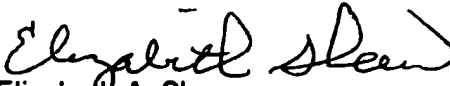

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Included for further reference on insecticide applicators are: McLaughlin (3,167,055), Knapp (3,364,900), Montgomery (4,091,767), Moore et al (5,666,906) and Greeson (6,230,660).
